DESCRIPTION

The TS7322K is a symmetrical reflective single pole dual throw (SPDT) switch designed for broadband, high peak power switching applications. Its broadband behavior from DC to 4GHz frequencies makes the TS7322K an excellent switch for all the applications requiring low insertion loss, high isolation and high linearity within a small package size.

The TS7322K is packaged into a compact Quad Flat No lead (QFN) 3x3mm 16 leads plastic package.

ABSOLUTE MAXIMUM RATINGS

PARAMETER	SYMBOL	RATINGS	UNITS
Power supply voltage	VDD	2.6 to 5.5	V
Storage temperature Range	T _{st}	-55 to +125	°C
Operating Temperature Range	T _{op}	-40 to +105	°C

Exceeding one or a combination of the Absolute Maximum Ratings conditions may cause permanent damage to the device.

SWITCH TRUTH TABLE

V2	V1	RF PATH
1	0	All OFF state
0	0	RFC-RF1
0	1	RFC-RF2

There is an internal pull-down to ground on the V2 control pin: this pin can be left floating when the all OFF state is not used.

If All OFF state is not used, then the switch can be operated with single control line V1.

There is an internal pull-down to ground on the V1 control pin: default switch state at start-up without any control voltage applied will be RFC-RF1 on.

EVALUATION KIT

The board consists of a 4 layer stack with 2 outer layers made of Rogers 4350B ($\epsilon_r = 3.48$) and 2 inner layers of FR4 ($\epsilon_r = 4.80$). The total thickness of the board is 62 mils (1.57mm). The inner layers provide a ground plane for the 50 Ω transmission lines. The thickness between signal and ground plane is 16mils. Each transmission line is designed using coplanar waveguide with ground plane (CPWG) model using a trace width of 32 mils (0.813mm), gap of 15 mils (0.381mm), and a metal thickness of 1.4mils (0.051mm).
